UKRAINIAN CRISISCARE TELEHEALTH SERVICE

WELCOME & INTRODUCTIONS

BACKGROUND

PROGRAM OVERVIEW

PATIENT JOURNEY

CALL TO ACTION

SUMMARY

BACKGROUND

- Practice Innovators International Pty. Ltd (PII) has established a new instance of our telehealth platform branded as GPNow www.gpnow.net to remotely connect Ukrainian doctors in Ukraine, neighbouring Ukrainian countries across Europe and beyond to provide telehealth consultations for displaced Ukrainian families.
- Working in collaboration with NGO partners such as the Vasco da Gama Movement (VdGM) <https://vdgm.woncaeurope.org/> we have developed and deployed a virtual clinic of more than 60 certified Ukrainian medical professionals.
- We have also built a team of amazing of UCTS volunteers to help with language translation, service promotion & support.
- The service has helped 6,500+ Ukrainian families since the service went live on April 1st 2022, providing medical advice, comfort & care

Adam, as a proud AWS Partner, we have been blessed to be powered & protected by AWS for the past 5 years.

Our telehealth platform provides VirtualCare for the most Vulnerable www.gpnow.net - our bushfirecare service in 2019 provided remote comfort & care for those affected by the fires 🔥 that raged across Australia.

We kept 3,000+ quadriplegics & paraplegics connected to their therapists during the pandemic, conducting 12,000+ telehealth sessions with ZERO downtime, launched a private telehealth service for 1,000+ aboriginals in remote regions of Australia to help "Close The Gap" and provided Rapid Antigen Testing support for 15,000 Malaysian citizens last year.

We have just completed a Ukrainian CrisisCare Telehealth Service "Proof of Concept" to provide FREE consultations for those in need of medical advice, comfort & care during the current crisis in Ukraine.

The response from AWS EMEA & AWS APAC has been overwhelming both in terms of technical support to ensure the platform is protected in the current hostile environment and is capable to scale to support 5m+ Refugees with 500,000+ FREE telehealth sessions supported by 50,000 volunteer doctors & 5,000 translators over the next 5 months.

All powered AWS! 😊

21st March 2022

Dear Rob,

Thanks very much for your hard work, and for reaching out to us. As a network across the European region (as defined by the WHO) we have members in almost all countries.

In this respect, we will provide support by utilising this network, and the various contacts we have with other networks, to help with recruiting family doctors and other healthcare professionals in providing this free service for Ukrainians in and outside Ukraine affected by this devastating invasion.

Best wishes,

Nick

GPNOW Helps Ukrainians with Global Humanitarian Telehealth Service Built on AWS

GPNOW created its telehealth platform and service to provide Ukrainians within and outside Ukraine with vital medical assistance using AWS Disaster Preparedness and Response Team.

[Overview](#) | [Opportunity](#) | [Solution](#) | [Outcome](#) | [AWS Services Used](#)

MEET THE TEAM

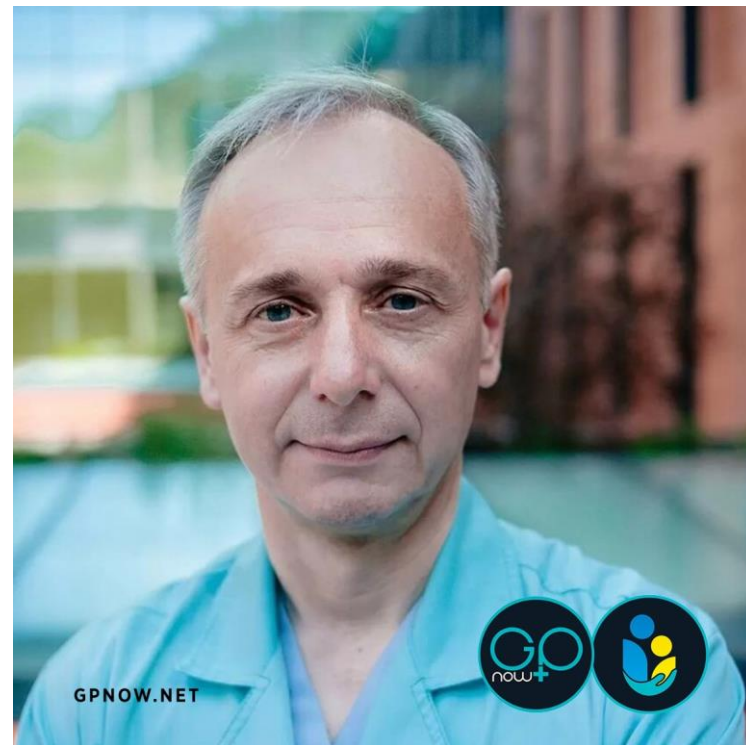

Dr Vadim Ilyashenko, MD

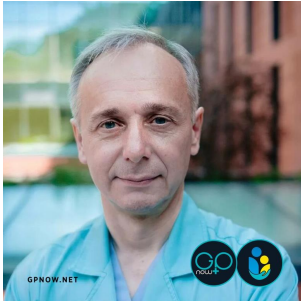

26 years of experience. Neurosurgeon, spine surgeon, pain specialist.

Place of work: private clinic Oberig, Kyiv, Ukraine.

Statement: After the start of the full-scale invasion of the Russian Federation into Ukraine in February 2022, many patients, including those who underwent surgery, were forced to leave their homes and move abroad or to other regions of the country. The platform GPNOW provided an opportunity to contact them, monitor the treatment process, as well as advise new patients who have difficulty accessing medical care due to the language barrier, due to the overload of the medical systems of the host countries, give comments on the results of examinations, give a second opinion on their health problems.

UCTS PROGRAM – Patient & Doctor Feedback

The child is 15 months old. I didn't have any catastrophic problem. But there was ignorance and misunderstanding of what was happening and how to behave in certain situations.

What to do if you offer porridge and only the third type of porridge agrees? And only from a green cup? Will there be problems with speech if we live in a German retirement village and have no contact with children? And many more different questions.

The most important is that I've got the access to the professional medical advice of a highly-qualified pediatrician during this difficult time, so now I can treat my child in a correct way. I just don't know what I would do, otherwise.

My daughter is only one year old, and she got sick just before the weekend. She had cough and running nose, didn't sleep at night. It's pretty difficult to make a swift appointment with a doctor in Germany, not to mention during the weekend.

So the guys just saved my life. Much appreciation and aratitude!

Thanks also to Tatyana Alhamad for the prompt assistance in getting to know your site and the fastest possible selection of a psychologist. Tatyana is a very kind and sympathetic person who is always ready to help everyone, she also shares and provides informational assistance regarding my daughter with school issues. A little about the site, everything is simple, convenient and accessible, a lot of useful and needy help, information for Ukrainians who are alone with their problems in a foreign country. Thank you so much that you did organize such a site, a community that is extremely necessary for everyone who is in a difficult situation!

My son (11 years old) and me were forced to leave our home in Kyiv in March due to hostilities in Ukraine. We lived in Romania (Botosani) for more than two months. Unfortunately, my diplomas and certificates are not recognized in Romania, and I did not know the local language. It takes years to retrain or learn a language and prove your education.

I needed to have income, in an unfamiliar country, and now that I have returned to Kyiv (and in Ukraine it is not very good with work and security issues now). The GPNOW platform allowed me to work remotely while in Romania and now, after returning home. So I can work remotely, and I have the

After our conversations, my eyes seem to open to obvious things. Thank you very much for your work. I am already waiting for our next meeting. Have a nice day! 🌹

UCTS PROGRAM – “Anastaysia’s Story” CHONDRAL CHORDOMA

🌸 A VERY SPECIAL STORY - About a very brave Ukrainian Girl 🌸

Anastaysia, from Kyiv now in Poznan Poland is 18 years old living alone in a hostel. A lovely young lady who married her "Romeo" at the start of the war - a soldier taking care of business back home in Ukraine UA

Anastasia has life-threatening throat and neck cancer and cannot get urgently needed treatment for her condition in Poland as the operation is extremely dangerous and expensive with a 50% probability of success and a high-risk of being rendered quadriplegic.

Alone and afraid reached she heard about our Ukrainian CrisisCare Telehealth Service and connected with Tanya Alhamad our amazing UCTS Practice Manager who has taken her under her wing - reaching out to our Chief Medical Officer Dr Vadim Ilyashenko for help.

Thanks to a wonderful lady in the US - April Chepovsky - a registered nurse from California and her "circle-of-friends" we have been able to have Anastaysia's case assessed by one of the top Oncologists at Yale - New Haven clinic and we are now working on a plan to transport Anastaysia to the US to receive the comfort & care she desperately needs...

We have many hurdles to overcome including organising further medical assessments, transport via Germany to the US, travel documents, accommodation and of course the operation itself which will require funding.

We do not know how we will overcome these challenges - but we do know we will NEVER give up on Anastaysia...

Thanks very much for reaching out. Of course, we will do everything in our power to help as we are strong supporters of the Ukrainian people during this awful time. A couple things to consider:

First – based on the video that has been sent – there is an obvious component of a neck mass. That cannot be resected through the nose and will need a resection through the neck, which could be a combined procedure with ENT and Neurosurgery. That said, I need to see all the imaging – MRI, CT scans, anything that you have, to be able to evaluate further the extent of the tumor. Given her symptoms described in the Word document, there must be some spinal involvement and we will need our neurosurgeons involved. I am copying our chief of pediatric neurosurgery as I would appreciate his engagement on this as well.

Additionally – I do have a colleague who is the chief of head and neck surgery at a university in Poland, and takes on complex cases like this on a regular basis. If it makes more sense, I am happy to have his involvement if that will expedite care.

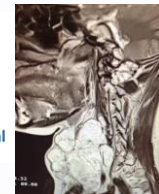

IF you can please send us the MRI and CT scans – ideally, the actual images rather than the reports – that would be a good starting point for us.

Thank you!

UCTS PROGRAM – “Anastasyia’s Story” CHONDRAL CHORDOMA

UCTS PROGRAM – “Anastaysia’s Story” CHONDRAL CHORDOMA

It's on the 22.02:) second surgery and on the 23.02 third and last one

5:43 am

Forwarded

It starts in 10h
5:43 am

You guys are crazy!!! 🤗 with you in spirit ✨ big hugs 🤗

5:43 am

Our brave Anastasiia goes in for her second round of surgery TODAY... this is to remove her tumor in her spine - it's a super risky with a 50% chance of being rendered paraplegic or worse - but we have an amazing team of 12 professors & surgeons at Leiden Medical University in NDL caring for our special friend - as you can see she is good spirits and ready to take on this critical stage of what we hope will be a full and speedy recovery... Please say a prayer for this amazing young girl who has endured so much over the past year or so - the next 48 hrs are critical 🙌🙏😊

5:49 am

Please, help! We can't do it alone!

We are a family from Ukraine.

Our daughter Polina is 4 years 7 months old and her exact diagnosis has not been established. The child does not speak (there is babble and vocalization), does not understand addressed speech, does not serve herself, toilet skills are lost, there is no eye contact. She uses peripheral vision, does not hold attention for a long time, and is difficult to teach, train. Polina has poorly developed gross and fine motor skills: awkwardness, unsteadiness of gait. She has a delay in intellectual development, but at the same time she is quick-witted. Does not follow elementary instructions, does not imitate. Behavior is disorganized.

A paradoxical behavior resulting from sensory discomfort, she examines objects by licking and sniffing.

The girl was born a healthy baby at term. The first year of her life she developed at the extreme limit of the norm, she was always an active girl. She was vaccinated with all the necessary vaccines according to the schedule. After the first year of life, we (parents) began to notice a deterioration in her well-being and a change in behavior. She began to sleep poorly, the imitation and pointing gesture disappeared, she stopped responding to the name, lost attention and concentration, became whiny and anxious.

We turned to doctors (neurologist, geneticist, pediatrician).

Examination and treatment did not give any results. At 1.6 years old, Polina took nootropics and sedatives. The electroencephalogram at that moment showed the norm. The treatment did not improve her condition at all, on the contrary, the child's sleep and behavior worsened.

Polina began to walk independently at 16 months, her gait was unsteady and clumsy, with a slight trembling of her body.

We did MRI and MRS.

MRS was not normal. In the brain, an increase in the concentration of alanine and phenylalanine, ornithine was found, as well as in the temporal lobes (bilaterally) an increase in the content of glutamic acid. The treatment was started again, from which no improvement was observed.

Polina was found to have HSV1/2, HHV7 and TTV viruses. At the age of 2.6 years Phenylalanine in the blood was increased. The doctors ruled out fetilketonuria as a diagnosis. At the age of 3.6 years, Pompe and Fish genetic syndromes were excluded.

At the age of 3 years 2 months, we submitted the first genetic panel to the US laboratory (INVITAE).

At 3.5 years old, the second genetic panel for 1190 genes was handed over to the same laboratory.

A pathogenic variant was found in the DEAF1 gene in a heterozygote.

Breakage of GRIN1, SPAT5, SZT2 genes with unknown clinical significance.

By this time, classes and restorative therapy did not stop, but they did not give any positive results.

At the age of 4 years 2 months Polina was diagnosed with EPILEPSY in Germany. Then we went to Lvov to do an electroencephalogram of the brain during sleep in order to rule out the Landau-Kleffner diagnosis. The study lasted 80 minutes, the diagnosis was not confirmed, but the diagnosis of epilepsy was not removed. According to EEG monitoring, there are pathological changes in background activity and epileptomorphic activity in the right fronto-central region with spread to the left hemisphere (fronto-central-temporal region) without the presence of prolonged spike-slow activity during sleep.

The child is taking an anticonvulsant and neuroleptics. Still no results.

We lost 3.5 years looking for the right diagnosis. And today we have many examinations, but we do not have a complete diagnosis and proper treatment. Three years of the child, which did not go for the benefit of her development, but only an increasingly strong backlog.

Our family asks for help in the treatment of the child through charitable foundations, to help with sponsorship in order to make the correct diagnosis and choose the right treatment. We want to give Polina the chance to live a fulfilling life. Thank you!

Alla, mother of Polina

SUMMARY

SUMMARY

- Our free 24x7 Telehealth (www.gpnow.net/ua) Service has already helped thousands of Ukrainians, wherever they are in Ukraine, in Europe or anywhere in the world.
- We've helped many traumatised women and children as well as recovering soldiers who cannot get the urgent care they need in the foreign countries they've had to move to.
- We have a team of Ukrainian health professionals providing crisis care including psychologists, neurologists, pediatricians and many more clinical specialisations. We've also developed specific mental health aids and health care content in native Ukrainian that we distribute to a growing community of displaced Ukrainians.
- The Telehealth service is proven, secure and ready to scale immediately. It is also backed by Amazon Web Services who have reviewed the platform and provide expert assistance to us as part of their Ukrainian support program.
- However, many thousands more need our help, but we need help ourselves to make more Ukrainians aware of the service and also to obtain funding to keep the service going.

PROGRAM FUNDING

A project of this magnitude requires significant funding & resources

The program will not be able to continue in 2023 without further investment

Our team have been working around-the-clock since the first week of the conflict to stand-up the service and launch a pilot “proof of concept” for Ukrainian Refugees and their families.

All costs incurred to date have been borne by PII & AWS In order to continue we urgently need to secure:

EUR 100,000

PLEASE VISIT: WWW.GPNOW.NET TO LEARN MORE ABOUT PROGRAM FUNDING OPTIONS

Private Contributions

Your funding will help resource our operation and help us rapidly deploy service.

Each €10 contribution = 1 Consultation

We are currently assisting 1,000+ Ukrainian Refugees & their families per month
 We pay our Ukrainian Doctors 10 EUR per day to be online & EUR 10 per consultation
 Our program sponsorship from AWS is now exhausted and will not be extended
 Our monthly operating costs are EUR 25k~ per month
 Our service is provided FREE OF CHARGE and is a not-for-profit humanitarian initiative
We are seeking financial assistance to keep the program going and growing

Payments for doctors

Our doctors are refugees too – we need to establish a sustainable funding model to avoid unnecessary hardship for our dedicated Ukrainian medical professionals

18 Oct 2022, 21:21 (6 days ago)

[Save email as template](#)

→ **Evgenia Vyshnyakova**
to me, Tanya ▾

Hello, Robert

Yesterday we discussed the issue of payment to doctors, and it became clear that payment would be received in a maximum of 30 days. We would like to inform you that all our doctors and specialists are waiting and continue to work in the same mode, as usual, they understand the situation and do not show dissatisfaction or impatience. But there are a few people who, like everyone else, just continue to do their job, but are now in a challenging life situation and we would like to inform you about this. This is purely our initiative. Perhaps it will be possible to speed up the process a little or start by paying them, or there will be some other alternative way to pay faster:

1. Firsenko Elena (gynecologist and the most active doctor on the platform, she consults patients almost around the clock - 1488 euros) - she is in Spain and does not receive any payments, she has only this source, she decided to move to Germany, where she can receive help, but Today she is in dire need of financial support.
2. Nadezhda Zhiva (psychologist - 1592 euros) in Italy could not pay the rent and is now forced to look for new housing, while she lost deposits for rent.
3. Maria Manoshicheva (pediatrician - 816 euros) in Germany, does not receive benefits and is currently without a livelihood.
4. Lyudmila Tsarenko (psychotherapist - 574 euros) in Kyiv
5. Valentina Kuzmuk (psychologist - 408 euros) in Kyiv

They do not ask or are indignant, we just, knowing their life situation, would like to ask you to pay attention to these people. And we hope that you can speed up their payment a little.

Thank you)

Best Regards, Evgeniya

“15 million UKRAINIANS NEED MENTAL HEALTH SUPPORT” First Lady Zelenska

Watch: Ukraine's first lady says her people have been living in constant stress since February

BBC News

Ukraine's First Lady Olena Zelenska has told the BBC that the whole of the country is "under constant stress".

Her comments come hours after a number of rocket attacks were reported in the country, including in the Kyiv region.

"We have been under constant stress from 24 February and that does not relent," she said.

Ms Zelenska says the government is implementing support to help Ukrainians get help for their mental health and is being assisted by the WHO.

"We need expert help and that's why we've approached the WHO who are helping us with psychological help."

Brainspotting

Who does Brainspotting work with?

Brainspotting is effective for a wide variety of emotional and somatic conditions. Brainspotting is particularly effective with trauma-based situations, helping to identify and heal underlying trauma that contributes to anxiety, depression and other behavioral conditions.

Dr Vadim Ilyashenko, MD
UCTS Chief Medical Officer
26 years of experience.
Neurosurgeon, spine
surgeon, pain specialist.
Place of work: private clinic
Oberig, Kyiv, Ukraine.

The number of Ukrainian
citizens with spinal cord
injuries is currently
unknown.

Working with SCIA to help
Ukrainians affected by a
Spinal cord injury is a
wonderful initiative.

Wednesday 14th March 2022

First responders and
volunteers carry an injured
pregnant woman with a
Spinal Cord Injury from a
maternity hospital that was
damaged by shelling in
Mariupol, Ukraine

The woman and her baby
have since died

Dianne Lucas – CEO SCIA

“SCIA’s Neuromoves spinal cord injury service helped many
Australian quadriplegics & paraplegics improve their
well-being

SCIA is pleased to announce we are working in
collaboration with our telehealth partner GPNOW to support
Ukrainians with spinal cord injuries”
